

GM Global Propulsion Systems

August 24, 2017

To facilitate improved and automated dexos GMOD oil test engine operation the exhaust coolant flow QI range will be increased from 14.75 – 15.25 lpm to 14.0 – 16.0 lpm. This change was incorporated in September 2016 and will be included in a revision of GMW 17043 in the next revision.
