

GMOD Conference Call Minutes Addendum
3pm April 14, 2016

1. Test stand re-qualification
 - Labs are required to complete 1 test on reference oil assigned by TMC to re-qualify stand used in precision matrix.
 - Y_i alone will be used for re-qualification. This test will be the first chartable test. R_i , Z_i , and Q_i will begin control charting with the first reference test after re-qualification.
2. Test Monitoring System updated
 - Lower control limits for R_i , and Q_i have been deleted. Only upper control limits will impact a stand's status for these 2 parameters.
 - Document can be accessed at <https://dexostrc.org/reference>. Select *Information Letters* and *GMOD* under Choose Filter. Select *GMOD information Files*. Since the test monitoring system has not yet started, the latest version is still called "Issue 1".
3. New WPD values
 - WPD values from the precision matrix calculated using the new weighting factors are available at <ftp://ftp.dexostrc.org/reference/docs/GMOD/MatrixStatusReports/>
4. Post-test ring end gap measurement
 - Post-test top and second ring end gap measurements will not be required.
